                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (30-APR-2002) Genome University School of Medicine, MO 63108, USA 5 (bases 1 to 65335) Waterston, R.H.
                                                            There is a single plasmid region from 24260 to 24349. Polymorphisms have been identified between AC107214 and AC112698. Data from AC114911 was used to finish this clone, AC112698.
                                                                                                                                                            NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-451F20, 2000 bp overlap;
the clone sequenced to the right is RP11-367N14. Actual start of
                                                                                                                                                                                                                                            The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong vectors: pBACe3.6
                                                                                                                                                                                                                                                                                                                                                                                                                                              Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

New isolated human genes and the secreted polypeptides they encode -

```
CC or ameliorating medical conditions, e.g. by protein or gene therapy.

CC Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each polymucleotide, based on which tissues they are most highly compressed in, and include developing products for the diagnosis or creatment of cancer, immune disorders, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune conditionations, allergy, hematopoietic disorders, sethma, immunodeficiency cord injuries, allergy, hematopoietic disorders, skeletal disorders, arthritic disorders, skeletal disorders, arthritic disorders, asthma, immunodeficiency cord injuries, and transplant rejection. The polypeptides are also useful for identifying their binding partners

The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and overian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid archirits and ulcerative colitis; (c) cardiovascular diseases such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1038

```
CC The present invention relates to novel human secreted proteins (ABR47633-CC ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins CC and their coding sequences are useful for the preparation of a diagnostic CC or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tabhycardia, cardiac arrest, coronary CC arteriosclerosis and myocardial ischaemia), neural disorders, immune CC system disorders, muscular disorders, reproductive disorders, for CC gastrointestinal disorders, pulmonary disorders, renal disorders, for CC considerative disorders and/or cancerous diseases and conditions, for confection, for treating thrombosis and arteriosclerosis, for treating or CC infection, for treating thrombosis and arteriosclerosis, for treating or CC constituted damage which occurs in neuronal disorders or CC neurodegenerative conditions such as Alzhaimer's disease and Parkinson's CC disease, to enhance bone and periodontal regeneration and aid in tissue ctransplants or bone grafts, to prevent skin aging or hair loss, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S

Claim 21; Page 764-765; 1216pp; English

CC ABZ71190-ABZ71478 represent cDNAs corresponding to 178 human secreted CC protein genes, and ABP0011-ABP00299 represent the proteins they encode. CC ABZ71479-ABZ71540 represent human secreted protein genomic fragments. The CC invention also encompasses antibodies specific for the secreted proteins, cities and host cells comprising a nucleic acid of the invention. The Secreted proteins, nucleic acids encoding them, antibodies or antibody CC fragments specific for the secreted proteins, and mediorating or preventing CC digestive disorders. Such conditions include disorders of protein CC digestive disorders. Such conditions include disorders of the mouth, CC oscophagus, stomach, small intestine, large intestine, liver, biliary CC tract and pancreas, and include cancers of these organs and tissues. The Secreted proteins and their nucleic acids may also be used in the CC treatment of immune disorders, inflammation, infection, Nucleic acids of the invention may be used for chromosome identification, chromosome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                          The invention relates to isolated nucleic acid molecules ADB91055-CC ADB91848 and ADB91835-ADB91911 encoding human secreted proteins ADB91449-CC ADB91834. Also disclosed is a recombinant vector comprising a CC polynucleotide of the invention, and a recombinant host cell comprising CC the recombinant vector. The polypeptide of the invention is useful in CC identifying a binding partner by contacting the polypeptide with a binding partner, and determining whether the binding partner increases or CC decreases activity of the polypeptide. The polypeptide, polynucleotide, CC antibody or its fragment, agonist or antagonist are useful for preparing CC a pharmaceutical composition for diagnosing or treating diabetes or CC conditions related to diabetes. The present sequence is that of the human CC the stability of the fused protein as compared to the secreted protein CC conly. Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                              5
                                                                                                                                                                                                                                          The invention relates to a novel human secreted polypeptide comprising a CC defined sequence given in the specification. The polypeptide, nucleic CC acid molecule, antibody, agonist or antagonist of the invention may be CC useful for preparing a composition for diagnosing or treating a CC haemopoietic or haematologic disorder such as anaemia, autoimmune CC disorders such as rheumatoid arthritis, inflammation, Grave's disease, CC diabetes, systemic lugus erythematosus or glomerulonephritis, CC neurodegenerative disorders including Parkinson's disease and Alzheimer's CC disease, wounds and hyperproliferative disorders including CC atherosclerosis or cancer, as well as bacterial, viral, fungal or CC parasitic infections. The polypeptide may also be used during gene CC therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the CC binding partner increases or decreases the activity of the polypeptide. The invertion sequence is that of the human secreted protein-related DNA of the polypeptide.
                                                                                                                          Matches

The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-cassociated proteins. Also included are an expression vector comprising the isolated nucleic acid or expression vector, a microarray for detecting creambinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above-comprising at least one probe comprising the above polypeptide, a hybridoma that produces the above antibody and a pharmaceutical composition comprising the above comprising the antibody, a pharmaceutical composition comprising the above concordidated antibody, a pharmaceutical composition comprising the above of ror detecting the presence or absence of cancer cells in an comprising the presence or absence of cancer cells in an comprising the presence or absence of cancer cells in an comprising the protein (CAP), methods for detecting cancer cells in an individual, a method for inhibiting growth of cancer cells in an comprising cancer activity or for a bioactive agent capable of modulating the activity of a CA protein (CAP), methods for detecting cancer cells in a cell. The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and cell-without of the printed sequence. Note: The sequence data for this patent did not form part of the printed cell ant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-FEB-2003; 2003US-00367094.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                       partient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT11112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as diagnostic markers for the prediction or identification of the mallgnant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent did not form nart of the vicintal special sequence and the patent did not form nart of the vicintal special sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing breast cancer in a patient comprises detecting the legene expression in cell or tissue samples, where a differential expression is indicative of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           25-JAN-2001; 2001US-0263757P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method of diagnosing the presence of, CC or susceptibility to, retinal dystrophy, cardiomyopathy, endocrinopathy, CC diabetes, or Alstrom syndrome in an individual. The method comprises CC typing in a sample from the individual the ALMS1 protein or ALMS1 gene CC ALMS1 is located to chromosome 2, more specifically to 2pi3. ALMS1 has CC ophthalmological, cardiant, antidiabetic, hepatotropic and nephrotropic CC activities, and can be used in gene therapy. The method is useful for CC diagnosing the presence of, or susceptibility to, retinal dystrophy, CC cardiomyopathy, endocrinopathy (e.g. liver disease or renal impairment), CC diabetes, or Alstrom syndrome in an individual. ALMS1 sequences can be CC used in an agent that prevents or treats retinal dystrophy, CC cardiomyopathy, endocrinopathy or diabetes is useful in manufacturing a CC used in an agent that prevents or treats retinal dystrophy, cardiomyopathy, endocrinopathy or diabetes is useful in manufacturing or Desing susceptible to retinal dystrophy, cardiomyopathy, endocrinopathy or diabetes. ACF42332 to ACF42747 and ABR82113 to ABR82118 represent for the avenual fiftering of the present invention.

CC an open reading frame of a CA sequence selected from any of the 95 cc polynucleotide sequences as mentioned in the specification, or its C complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above CC entibody and a pharmaceutical composition comprising the above CC entibody and a pharmaceutical excipient, a kit for detecting cancer cc colls (comprising the antibody cited above, methods for diagnosing cancer cc individual, a method for inhibiting growth of cancer cells in an CC individual, a method for inhibiting growth of cancer cells in an CC individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above CC polynucleotide or polypeptide (or their fragments), methods of screening CC for anticancer activity or for a bioactive agent capable of modulating cancer in a cell. The composition and methods for detecting cancer cells associated with expression of a polypeptide in a test cell sample, a method for treating cancers and a method for inhibiting the expression of CA gene in a cell. The composition and methods are useful for detecting, Cd diagnosing, preventing and treating cancers, especially lymphoma and cell cancer. The present sequence is a human CAP genomic sequence. Note: The sequence data for this patent did not form part of the printed concers. The present sequence is a human CAP genomic sequence. Note: The sequence data for this patent did not form part of the printed concers. The present sequence is a human CAP genomic sequence. Note: The sequence data for this patent did not form part of the printed concers.

The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid cited above, a host cell comprising the above recombinant nucleic acid cor expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above-mentioned nucleotide sequences, an isolated polypoptide (encoded within
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             claim 16; segid 24; 310pp; English.

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention

The sequences can be used in the treatment of cardiovascular, urinary syste reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to methods and systems for identifying naturally occurring antisense transcripts. The method is useful for quantifying gene expression levels and for detecting, quantifying or specifically regulating antisense and respective sense transcripts thereby enabling detection and treatment of a wide range or disorders, such as systemic lupus erythematosus, inflammatory diseases, rheumatoid disorders, autoimmune diseases, diabetes, multiple sclerosis, cardiovascular and gastrointestinal diseases, atherosclerosis, skin diseases and cancer. T present sequence is human 76p antisense transcript DNA used to illustra the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying putative naturally occurring antisense transcripts, useful for quantifying gene expression levels, and detecting and/or treating inflammatory, autoimmune or cardiovascular diseases, diabetes, arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       26-NOV-2001; 2001US-00993398

The invention relates to identifying putative naturally occurring CC antisense transcripts (NAS) by computativally aligning a first database of of sense-oriented polynucleotide sequences with a second database of CC expressed polynucleotide sequences, identifying expressed polynucleotides (CC forming a duplex with sense-oriented polynucleotides, or screening a CC database of expressed polynucleotide sequences based on a sequence CC criterion selected to identify NAS. Also included a kit for quantifying an NAS of CC interest, designing artificial antisense transcripts using a database of NAS, a computer readable storage medium comprising a database of System for generating a database of several of NAS, quantifying an mRNA of interest in a biological sample, quantifying the expression potential CC interest in a biological sample, quantifying an abnormal CC interest in a biological sample, quantifying an abnormal phenotype and comparing the expression level of NAS of interest in cells having an abnormal phenotype with an expression level cells having a community and another comparing the expression level of NAS of interest in cells having an abnormal phenotype, treating or preventing a first condition or syndrome associated with an up regulation of NAS complementary to a naturally occurring mRNA transcript and diagnosing a disease, condition or syndrome associated with a standard expression ratio of an mRNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying putative natural antisense transcripts by aligning database having sense-oriented polynucleotide sequence with database of expressed polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; 88; natural antisense sequence; diabetes; autoimmune disease; Parkinson's disease; Alzheimer's disease; HIV infection; malaria; cholera; influenza; rabies; diphtheria; breast cancer; colon cancer; cervical cancer; melanoma; lung cancer; ovarian cancer; pancreatic cancer; prostate cancer; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (LEVA/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful for identifying putative naturally occurring antisense transcripts and for generating a database of NAS. An agent such as ribozyme, or an oligonucleotide such as sense transcripts is useful for treating or preventing a disease, condition or syndrome associated with up regulation of NAS. NAS is useful for diagnosing and treating a variety of diseases or pathological conditions associated with an abnormal expression of an mRNA molecule of interest, comprising diabetes, autoimmune diseases, parkinson's disease, Alzheimer's disease, HIV, malaria, cholera, influenza, rabies, diphtheria, breast cancer, colon cancer, cervical cancer, melanoma, lung cancer, ovarian cancer, pancreatic cancer, lymphoma and leukaemia. The present sequence is a human natural antisense transcript identified by the method of the invention.

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF FILE REFERENCE: CLOO1307

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/247,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NO 16554

RESULT 5 US-09-949-016-16503

Sequence 16503, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

ITILE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

The polynucleotides and their corresponding secreted CC polypeptides are useful for preventing, treating or ameliorating medical CC conditions, e.g. by protein or gene therapy. Also pathological conditions CC can be diagnosed by determining the amount of the new polypeptides in a CC sample or by determining the presence of mutations in the new CC polynucleotides. Human secreted protein s and their polynucleotides can CC tumours, neurodegenerative disorders, developmental abnormalities and CC tumours, neurodegenerative disorders, developmental abnormalities and CC autoimmune diseases, behavioural disorders, schizophrenia, osteoporosis, CC arthritis, infections, AIDS, spinal cord injuries, transplant rejection, CC diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, cand testabolic disorders. The proteins or polynucleotides can also be used CC and metabolic disorders. The proteins are also useful for cidentifying their binding partners. AADS98008 to AAZ98016 and AAY87063 are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

CC ameliorating medical conditions, e.g., by protein or gene therapy.

CC ameliorating medical conditions, e.g., by protein or gene therapy.

CC new protein in a sample or by determining the presence of mutations in

CC the new genes. Specific uses are described for each of the 71 genes,

CC based on the tissues in which they are most highly expressed, and include

CC disorders, cancer, tunours, foetal and developmental abnormalities,

CC disorders (e.g., rheumatoid arthritis), inflammation, allergies, autoimmune

CC cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease),

CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g.,

CC psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders,

CC proliferation, to prevent skin aging due to sunburn, to mainteain organs

CC proliferation, to prevent skin aging due to sunburn, to mainteain organs

CC partners, and in chemotaxis, and can be used as a food additive or

CC preservative to modify storage properties. Antibodies specific for a

CC protein of the invention can be used in alleviating symptoms associated

CC with the disorders mentioned above, and in disgnostic immunoassays e.g.,

CC present sequence represents a human secreted protein of the invention

                                                                                                                                                                                                                                                                                                                                          र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC secreted protein (and its fragment, domain, epitope, variant, excetted command species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell control of the secreted protein. The nucleic acid and protein are used to gartner of the secreted protein. The nucleic acid and protein are used to grevent, diagnose, treat or ameliorate a medical condition in e.g. cc humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for cexample aucoimmune diseases e.g. rheumatoid arthritis, hyperproliferative cd isorders e.g. neopleasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, cc angiogenesis, nervous system disorders e.g. Alzheimer's disease, cc e.g. corneal infection. Many other diseases and disorders are listed in the specification. The polypeptides can also be used to aid wound healing can epithelial cell proliferation, to prevent skin aging due to subsurn, co maintain organs before transplantation, for supporting cell culture of polypeptides can also be used to aid wound healing confirmary tissues, to regenerate tissues and in chemotaxis. The cc polypeptides can also be used to aid wound healing confirmate tissues and in chemotaxis. The cc polypeptides can also be used to aid wound healing confirmate tissues and in chemotaxis. The cc polypeptides can also be used to aid wound healing confirmate tissues and in chemotaxis. The cc polypeptides can also be used to aid wound healing confirmate tissues and in chemotaxis. The cc polypeptides can also be used to aid wound healing to maintain organs before transplantation, for supporting cell culture of confirmate tissues and in chemotaxis. The confirmate to a novel human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

CR ABZ71479-ABZ71540 represent human secreted protein genomic fragments. The CC invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant CC vectors and host cells comprising a nucleic acid of the invention. The CC secreted proteins, nucleic acids encoding them, antibodies or antibody CC fragments specific for the secreted proteins, and modulators of protein cC digestive disorders. Such conditions include disorders of the mouth, CC tract and pancreas, and include cancers of these organs and tissues. The CC treatment of immune disorders, inflammation, infection, CC treatment of immune disorders, inflammation, infection, CC hyperproliferative disorders, and to promote wound healing. Nucleic acids mayping, in gene therapy, for identifying individuals from minute comparison. The present sequence represents a human secreted protein of the invention may be used for chromosome identification, chromosome constructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC ADB91834. Also disclosed is a recombinant vector comprising the recombinant vector comprising of the recombinant vector. The polypeptide of the invention, and a recombinant host cell comprising the recombinant vector. The polypeptide of the polypeptide with a comparison of the recombinant vector. The polypeptide of the polypeptide with a comparison of the polypeptide of the polypeptide with a comparison of the polypeptide. The polypeptide, polypuccleotide, comparison of the fragment, agonist or antagonist are useful for preparing conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabetes. The present sequence is that of the human conditions related to diabete. The present sequence is that of the human conditions related to the secreted protein conditions. Note: The sequence data for this patent did not form part of the conditions protein, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel human secreted polypeptide comprising a CC defined sequence given in the specification. The polypeptide, nucleic CC scid molecule, antibody, agonist or antagonist of the invention may be CC useful for preparing a composition for diagnosing or treating a CC hasmopoletic or hasmatologic disorder such as anaemia, autoimmune CC disorders such as arneumation, Grave's disease, CC diabetes, systemic lupus erythematosus or glomerulonephritis, CC neurodegenerative disorders including parkinson's disease and Alzheimer's CC disease, wounds and hyperproliferative disorders including CC disease, wounds and hyperproliferative disorders including cC disease, wounds and hyperproliferative disorders including CC therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the CC binding partner increases or decreases the activity of the polypeptide. CC The current sequence is that of the human secreted protein of the

cione detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AXX00602) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AXX00611-X00724; amino acid sequences AAW67807-W68004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the proposed by the protein of the specific pathological conditions can be diagnosed by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                           Young P, Florence
                                                                                                                                                                                                                                    New isolated human genes and the secreted polypeptides they encode - useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.
                                                                                                                                                                                   This sequence represents a secreted human protein encoded by the gene
                                                                                                                                                                                                                                                                                         WPI; 1999-070066/06.

                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                 cc dermal papilla, human keratinocytes and meonatal foreskin fibroblasts, cc and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cc cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate stimulate to thinding of HIV-1 to leukocytes. The invention may also be used to treat corowth and developmental defects, skin wounds and hair follicle crowth and developmental defects, skin wounds and hair follicle crowth and developmental defects, skin wounds and hair follicle corowth and developmental defects, skin wounds and hair follicle crowth and sequences AAY75942-Y76123 represent polypeptides encoded by counces AAY75942-Y75147, AAY76020-Y76021, AAY76094-Y76104 and AAY76119 counce generies AAY75942-Y75989, AAY76021, AAY76071, AAY76106-Y776109 and AAY76112 are proteins with an N-terminal signal sequence, indicating that they are secreted. Sequences AAY75986-Y75989, AAY76061-Y76071, AAY76106-Y776109 and AAY76112 are proteins with one or more putative transmembrane
                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                          The present sequence is a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenests, inhibiting angiogenests and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of
                                                                                                                                          AAE06054

cc new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, can based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative cc disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune cdisorders, cancers, timours, foetal and developmental abnormalities, cancers, tumours, foetal and developmental abnormalities, commune control of proliferative commune control of proliferative commune communes are most in the immune system, AIDS, autoimmune communes, cancers, allergies, and include communes communes, and insorders, disease of the immune system, AIDS, autoimmune communes, and insorders, disease of the immune system, AIDS, autoimmune consists, as a control of communes, and insorders, and insorders, and infections. The compliancy-related disorders, and corine disorders, and infections. The compliancy-related disorders, endocrine disorders, and infections. The consists of the insorders, to identify their cognate ligands or binding corresponding to the insorders as and in chemotaxia, and can be used as a food additive or properties of the invention can be used in alleviating symptoms associated control of the invention can be used in alleviating symptoms associated control sequence represents a human secreted protein of the invention can be used in managenesis. The invention can be used in alleviating symptoms associated control sequence represents a human secreted protein of the invention.

AAE06133-AAE06205 represent human secreted protein fragments. The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the

25-SEP-2000; 2000US-0234925P. 12-JAN-2001; 2001WO-US000911. 24-SEP-2001; 2001WO-US029871. (HUMA-) HUMAN GENOME SCI INC

Novel 71 isolated secreted polypeptides and polynucleotides encoding the polypeptides, useful for treating Huntington's disease, sepsis, meningitis, thrombocytopenia, hemolytic anemia, rheumatoid arthritis, WPI; 2002-362489/39. N-PSDB; ABK69739.

Claim 11; Page 1228; 1478pp; English

CC fragment, homologue complement or allelic variant) encouring a human CC secreted protein (and its fragment, domain, epitope, variant secreted CC form and species variant). Also included are a recombinant vector CC comprising the nucleic acid, a recombinant host cell comprising the secreted protein are recombinant host cell comprising the vector, an antibody against the secreted protein, a recombinant host cell comprising the secreted protein. The nucleic acid and protein are used to partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or ameliorate a medical condition in e.g. CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for CC example autoimmune diseases e.g. rhaumatoid arthritis, hyperproliferative CC eisorders e.g. neoplasms of the breast or liver, cardiovascular disorders CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, CC infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infection. Many other diseases and disorders are listed in CC e.g. pecification. The polypeptides can also be used to aid wound healing can epithelial cell proliferation, to prevent skin aging due to sunburn, CC to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The collypeptides can also be used as a food additive or preservative to circusase or decrease storage capabilities. The preservative to The invention relates to an isolated nucleic acid molecule (or its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABB72197;
                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of cDNAs isolated from human, murine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in meantainting tissue integrity, in wound healing and in modulating immune responses. The present sequence is a polypeptide of the invention

RESULT 14
                             The polymucleotide sequences given in AAZ98017 to AAZ98108 encode the CC protein can have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; immunosuppressive; antiinflammatory; nootropic; neuroprotective; and ccl minumosuppressive; antiinflammatory; nootropic; neuroprotective; and cc polymeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polymeptides in a can be diagnosed by determining the amount of the new polypeptides in a complete or by determining the presence of mutations in the new cc polymucleotides. Human secreted protein s and their polymucleotides can be used for developing products for the diagnosis or treatment of cancer, be used for developing products for the diagnosis or treatment of cancer, cc polymucleotides. Human secreted protein s and their polymucleotides can complymucleotides, blood disorders, diseases of the immune system, cc autoimmune diseases, hepatic and renal disease, inflammation, allergies, and cc disbetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, cc arbtritis, infections, AIDS, spinal cord injuries, transplant rejection, cc diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, can also be used and metabolic disorders. The proteins or polymucleotides can also be used cod additives or preservatives. The proteins are also useful for sequence used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ruben SM, A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  15-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                             This sequence represents a human secreted protein of the invention. The coxtended CDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative identification by DNA sequencing. They may also be used in the proteins encoded by the extended cDNAs are useful in identification of tissue specific continue types or cell species, as well as identifying tissue specific soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary diseases or drug response. Signal sequences from the cDNAs can be used in construction of secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter of several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and relative dispassed in turn and interval.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
